

PRODUCT

Boomstarter.network—a blockchain-based crowdfunding platform with smart-contracts and crowdmining technology.

CROWDMINING TECHNOLOGY

Many people will be able to support projects with the computing power of their equipment. It is enough to have an ordinary home computer, and a substantial result is achieved by mass participation

INSTANT TRANSACTIONS

Thanks to the architecture of smart-contracts, the creators will be able to receive the collected funds almost instantly. The average processing time for transactions in the Ethereum network is a few minutes

GUARANTEED FUNDS FOR ALL PARTIES

Ethereum-based smart contracts depend on only one thing — strict logic with clearly defined conditions. Once a predetermined amount is collected within a predetermined timeframe, the smart contract transfers the money to the creator within a few minutes. This process does not depend on any third parties or forces, only on the logic laid down in the smart contract.

PROBLEM

INTERNATIONAL RESTRICTIONS

Citizens of only 22 countries can place their project on Kickstarter without a representative. The population of these countries is a bit over 1 bln people. But there are 6 bln of potential inventors, creators and businessmen who can't participate in international crowdfunding.

HIGH COMMISSIONS

Every crowdfunding platform charges a commission for its services. It is their one and sometimes the only source of income. Commission rate varies from 5% to 15% (sometimes even higher)

LIMITED WAYS TO HELP PROJECTS

Meanwhile, there's still no tool for raising funds in cryptocurrency and mining.

INABILITY TO CONTRIBUTE INTANGIBLY TO THE PROJECT

Many users have are not able to support the project with money, but they still like the idea and are ready to participate in projects development by other means
